

Tips to KEEP your CAR ready for MOONSOON

TYRES

- Replace worn out tyres as they may skid on muddy or wet stretches. Minimum tread depth of 1.6 mm is legal requirement. However, for rainy season, ensure higher tread depth for better grip.
- If replacing only 2 tyres, put new tyres on the rear position.
- Get Wheel alignment and check wheel balancing before monsoon.
- Maintain the recommended inflation pressure.

BRAKE

- Get brakes checked. Replace brake fluid and ensure they don't leak
- Brake drums and brake pads need to be checked too for wear and tear.

WIPERS & WINDSCREENS

- Replace the wiper pads to ensure a clean windshield even during heavy rain.
- For better rearview install a rear wiper.

PAINT

- Get a fresh coat of anti-rust paint applied on the under-chassis.
- Get a wax coating done to the car body just before the monsoon.

LIGHTS

- Check the headlights, indicators, reverse indicators and tail lamps as well since your vehicle needs to be visible to others during a heavy shower.
- Stay on low beam while driving. High beams reflect off the water and may reduce visibility.

AIR CONDITIONER

- Sudden fogging of the windshield is a major hazard during the monsoon. The AC should be run on the defog mode before setting out on a rainy day

CAR DRIER

- Keep a vacuum cleaner or a drier in the car so that you can dry the seats and the mats.
- Also keep a car perfume at hand.

SEEPAGE

- An overnight rain might lead to seepages through the doors and glasses. Get the weather seal replaced if needed.
